

## EDITORIAL

This issue takes readers on matters related to various environmental themes, bringing staff to read the *water* theme in various aspect of care, such as diagnostic quality, wastewater treatment, methods of quality analysis, water management and other not less relevant.

With the theme *solid waste* papers are presented that show the use in agriculture and use of castor bean hulls, industrial solid waste management, use of sewage sludge on the soil beyond the consumption of inputs and production of poultry waste generation beyond biogas from sewage sludge.

Also of relevance are presented articles on environmental health, such as abiotic factors associated with *Aedes aegypti*, accidents with venomous animals, pesticide applicator safety in Brazil, control of African snail *Achatina fulica*.

Also deserve attention from readers articles that deal with environmental management, use of remote sensing to assess temperature and article that deals with the social representations in the environment.

Again, the origin of the published sweeps the country. So we appreciate the participation of all researchers and professionals who have published their articles in this volume take this opportunity to invite once again, the entire environmental community to use this newsletter as a tool to disseminate their work.

Good read!
